Measuring Water Equity

Water Equity Indicators help communities to...

1. Prioritize investments and inform project planning
2. Achieve equity-based water service delivery goals and strategic key performance indicators
3. Communicate water equity progress to diverse stakeholders
4. Access funding for environmental justice communities

We are working with a small group of U.S. water and wastewater utilities to demonstrate these outcomes in 2022. If improving water equity in your community is important to you or you would like to learn more about how you can use Water Equity Indicators, reach out to me at Jessica.moyer@xylem.com or find me on LinkedIn!

Note: We generated this data for illustrative purposes, based on industry averages, to illustrate the potential of the tool across various types of water utilities & communities.
